**Figure 5** A three dimensional representation of the **inverse square law**. As the distance from the point source of sound increases from **X** to **2X** to **4X**, a finite amount of power is dissipated over a larger and larger area (from 1 m<sup>2</sup> at **X** to 4 m<sup>2</sup> at **2X** to 16 m<sup>2</sup> at **4X**). Hence, the intensity (energy/sec/m<sup>2</sup>) decreases inversely with the square of the distance from the source.

**Figure 6** Percent words correct scores for normal-hearing and moderately hearing-impaired school-age children (adapted from Finitzo-Hieber T, Tillman TW. Room acoustics effects on monosyllabic word discrimination ability for normal and hearing-impaired children. J Speech Hear Res 1978;21:440-458).
